Paper / Subject Code: 50924 / Digital Logic & Computer Architecture

(Time: 3 Hours)

Total Marks: 80

- N.B.
1. Question No. 1 is compulsory
 2. Attempt any **three** questions from remaining five questions
 3. Assume suitable data if **necessary** and justify the assumptions
 4. Figures to the **right** indicate full marks

- Q1 A Define the terms Computer Organization and Computer Architecture and differentiate between them with an example. 05
- Q1 B Explain IEEE 754 Floating point representations. 05
- C Define Instruction cycle. Explain it with a detailed state diagram. 05
- D How Hardwired control unit differs from Micro programmed control unit 05
- Q2 A Draw a neat flow chart of Booths algorithm for signed multiplication and Perform 7×-3 using booths algorithm 10
- B Explain the different addressing modes. 10
- Q3 A Explain state table method of designing a Hardwired Control unit 10
- B Represent 3.5 in IEEE 754 Single precision Format 05
- C Explain SR Flip Flop 05
- Q4 A Consider a 4-way set associative mapped cache with block size 4 KB. The size of the main memory is 16 GB and there are 10 bits in the tag. Find- 10
1. Size of cache memory
 2. Tag directory size
- B Explain Micro instruction format and write a microprogram for the instruction ADD R_1, R_2 10
- Q5 A A program having 10 instructions (without Branch and Call instructions) is executed on non-pipeline and pipeline processors. All instructions are of same length and having 4 pipeline stages and time required to each stage is 1nsec. (Assume the four stages as Fetch Instruction, Decode Instruction, Execute Instruction, Write Output) 10
- i.) Calculate time required to execute the program on Non-pipeline and Pipeline processor.
 - ii) Show the pipeline processor with a diagram.
- B Write a short note on cache coherency. 05
- C Describe the characteristics of Memory. 05
- Q6 A Explain Flynn's classification. 10
- B Explain different types Distributed and Centralized bus arbitration methods 10

Q.P. Code
